

The Experts in Garage and Workshop Floor Restoration

Workshops And Garage Floor Coatings at Panther Protective

Panther Protective Coatings are one of Perth's most trusted Garage and Workshop Flooring advisers and installers. We have been installing [epoxy flooring](#) systems to the industrial, commercial, building maintenance and retail sectors since 1999.

Based on the activity and use of your workshop or garage, we will recommend the most appropriate concrete floor coating for your needs. We consider vehicle movement, occupational health and safety, environmental elements, chemicals uses and cleaning and maintenance when assessing your needs. Our aim with workshops and garage floors is to give your floors a uniform, hard-wearing and long lasting surface that will stand the test of time.

Not only does professionally installed flooring help make your workshop safer and more efficient, these surfaces are easier to clean and maintain – resulting in a better looking workshop or garage floor and more pleasant working environment.

Flake Floor

A flake floor is a very cost effective way of rejuvenating an old, stained, tired, chipped concrete floor. It not only creates a fantastic decorative look with a high gloss finish, but also covers over all those ugly stains, marks and chips. When installed properly, it will create a very hard wearing, scratch resistant, seamless (no joints), easily cleanable surface, that is chemical resistant, impervious to stains, and will last for many years to come.

Epoxy Floor Coating

Epoxy is widely considered to be the best choice for a garage floor coating. It provides a glossy finish that can be etched or stained with unique colors and patterns, and it can withstand even the worst abuse. Epoxy will last for years and is highly resistant to chipping, scuffing and scratching. In addition, it protects the floor from spills of all sorts, including chemicals, oil and water.
